

Statement of Service

Service Philosophy: Service is an integral part of my academic identity, complementing and strengthening my research, teaching, and mentoring. I view service as a responsibility to help build the institutional and professional structures that enable faculty and students to succeed. My approach centers on three priorities: contributing to effective academic governance, sustaining rigorous and constructive scholarly communities, and expanding opportunities for students and colleagues through mentorship, outreach, and engagement. Across these activities, I seek to be a dependable academic citizen who contributes where my experience can create lasting value.

Scholarly and Professional Service: I contribute extensively to scholarly peer review, which I view as an important responsibility for maintaining the rigor and integrity of the research community. My journal reviewing spans optimization, machine learning, information theory, network science, data mining, transportation, and computational systems, including the *SIAM Journal on Optimization*, *Transactions on Machine Learning Research*, *ACM Transactions on Knowledge Discovery from Data*, *ACM Transactions on Internet Technology*, *IEEE Transactions on Computational Social Systems*, *IEEE Transactions on Knowledge and Data Engineering*, *IEEE Transactions on Information Theory*, and *IEEE/ACM Transactions on Network Science and Engineering*.

I have also reviewed for leading conferences including the *International Conference on Machine Learning*, *Conference on Neural Information Processing Systems*, *ACM SIGKDD Conference on Knowledge Discovery and Data Mining*, *International AAAI Conference on Web and Social Media*, *AAAI Conference on Artificial Intelligence*, *International Conference on Learning Representations*, *Conference on Uncertainty in Artificial Intelligence*, *Conference on Causal Learning and Reasoning*, *European Conference on Machine Learning*, and *International Conference on Artificial Intelligence and Statistics*. My reviewing contributions were recognized with a *Gold Reviewer Award at the International Conference on Machine Learning in 2026*. I have also chaired a session at the *ACM International Conference on Information and Knowledge Management*. These activities allow me to contribute not only to evaluating scholarship but also to creating forums for productive intellectual exchange.

Institutional Service: At the University of Illinois Urbana–Champaign, I contribute to departmental and university initiatives spanning curriculum, admissions, student recognition, research communities, and academic programs. My committee service has included the MEng Admissions Committee, Broadening Participation in ECE Committee, Autonomy and Robotics Committee, Scholarships, Student Awards, and Honors Committee, Curriculum Committee, and Colloquium Committee. These responsibilities have allowed me to contribute to decisions affecting academic programs, student opportunities, and departmental priorities. I have also served as a reviewer for the Chancellor’s Call to Action Research Program, extending this service to university-level research initiatives.

My institutional service also emphasizes faculty and student development. As a microteaching facilitator, I have helped teaching assistants strengthen classroom practice through structured feedback. As a KEEN Consultant, I advise faculty from other institutions on AI education projects and educational innovation. I have also contributed to the City Scholars program and served as a judge for the Undergraduate Research Symposium and the Cozad New Venture Challenge. Together, these activities reflect my commitment to connecting academic programs with research, experiential learning, and innovation.

Leadership, Outreach, and Community Building: My service has consistently included community building beyond formal committee responsibilities. At Purdue University, I served as President and Treasurer of the INFORMS Student Chapter, organizing seminars, networking events, and professional-development activities that brought together students and researchers across disciplines. These roles gave me experience coordinating programs, working with faculty and student leaders, and creating opportunities for intellectual exchange and professional connection. I also represented graduate students through advisory and student leadership roles, contributing to discussions on academic affairs and the broader graduate student experience. Together, these experiences strengthened my commitment to collaborative leadership and meaningful academic service.

At Illinois, I have continued this outward-facing engagement through entrepreneurship, professional outreach, and programs connecting students and faculty with broader communities. I have represented engineering programs at events including Hack OHI/O at The Ohio State University, the Emerging Researchers National Conference, and the Society of Hispanic Professional Engineers National Convention. I have also contributed to I-Engage through the Office of the Provost at Illinois and the EMxAI Summit at the University of Dayton. I view such activities as part of a broader responsibility to create pathways into technical fields, connect academic expertise with external communities, and help students see themselves as participants in the larger professional and research ecosystem.

Future Service: Going forward, I plan to deepen my contributions at the intersection of academic governance, AI and data-driven education, research community building, and student development. I am particularly interested in service that strengthens responsible AI initiatives, supports interdisciplinary research, expands experiential and entrepreneurial learning, and creates opportunities for students to participate meaningfully in research and professional communities. My long-term goal is to contribute as an engaged academic citizen who helps institutions maintain rigorous standards while remaining responsive to new technologies, emerging disciplines, and the evolving needs of students and society.
